

E-vehicles and much more: Paradigm shift into the new energy age

Example: electric vehicles of the "next" generation (cars, buses, scooters, bicycles, etc.) that are constantly charged by our neutrino power plants and therefore do not need charging stations.

Fakt:

(Auszug von unserem Techn.-Leiter)

The current technicians work at the direction of our politicians according to our findings on unrealistic solutions, e.g. Basic load capacity of the electricity grid by converting electricity into hydrogen and back ...

But NEUTRINO® Energy is the FUTURE SOLUTION.

With today's level of development, our technicians will be able to realize the following solutions in the next 24 months; Basis is the production of a machine for film production, which is commissioned, from which follows:

- a) Mobile phone power supply without mains**
- b) Table lamp without mains**
- c) Wireless transponder with 1.8 GigaBit without mains, without harmful radio waves**
- d) 5KWh - power plant for car driving without charging stations (24 V DC)**
- e) Domestic supply without grid connection (220 V AC / 5 KW)**
- f) Industrial power without grid connection (380 V AC / 65-70 KW and many other possibilities.**

The solutions are currently all available and just need to be built and tested. Clever minds recognize the high potential of Neutrino®, want to participate in our success, be freer? Ask us your questions: neutrino-energy@t-online.de
